OUTLINE:
Introduction to Research trains the participants on how to start a research project either in M.Sc., M.Phil., Ph.D. or any other research project either by Students or Professionals irrespective of their field of specialization (Engineering/Arts/Social Sciences/Science/Law etc.). Literature survey being the most critical part of any research project, this course provides the knowledge about the process of how to start and complete literature survey in stipulated time. In addition, the course also gears up the participants for effective technical communication - both oral and written.

OBJECTIVES:
On completion of this course, participants will be prepared for research by developing skills to:
- Identify an area of research.
- Identify different methods to go about researching in a particular area.
- Read research papers.
- Make technical presentations of the chosen research papers.
- Write a critical review on a research paper.
- Develop the ability to work independently in a chosen research area.
- Write Literature Survey in the chosen field of research.

DESIGNED FOR:
Students/Professionals who intend to start research as part of M.Sc., M.Phil., Ph.D. studies or any project, irrespective of any specialization (Engineering/Arts/Social Sciences/Science/Law etc.)
